### CITIZENS ASKED TO HELP LOCATE POTHOLES AS SPRING APPROACHES

There's always one telltale sign that signals the beginning of spring in many cities worldwide – potholes!

Potholes are commonly seen in the spring due to the expansion and contraction of ground water after it has entered into the ground under the roadway. When the water freezes, it expands – creating holes in the driving surface. Considering a wet and cold season is just about to end, many new holes will be popping up.

City of Norfolk Street Division crews are already hard at work locating and filling the holes. If you notice any potholes that could be dangerous or damaging to vehicles, you can report them to the Street Division at 402-844-2180. When notifying them about a pothole or bump, please include a house address or a description of the location which will help the crews locate the exact spot that needs repaired.
